

Source Code Quality and Security

13 January 2009 · CONFIDENTIAL

Klocwork

Tony Czarnik

Agenda

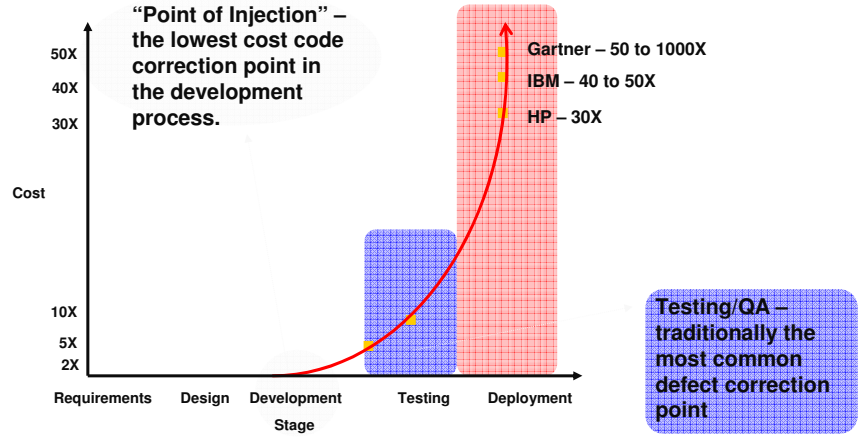

```
print_header( ... void FaxCli
$notification ... void FaxCli
sed -e "s/APP_VERSION/${APP_VEKS
{double md, nd, q, *l
```

- Quality & security: issues & trends
 - » Traditional testing limitations
- Source code analysis (SCA) tools
 - » First and second generation tools
 - » Third generation tools
 - CMMI in-phase containment
- National security standards
- Architectural analysis use cases
- Source code metrics & trending
- SCA tool integration
- Case study: Motorola

Static Source Code Analysis

```
print_header( -- void FaxCli
notification -- void FaxCli
sed -e "s/APP_VERSION/${APP_VEIR
{double md, nd, q, *l
```

- Problems with traditional testing techniques
 - » Black box; dynamic; functional testing: incomplete
 - » Walkthrus: time-intensive & incomplete

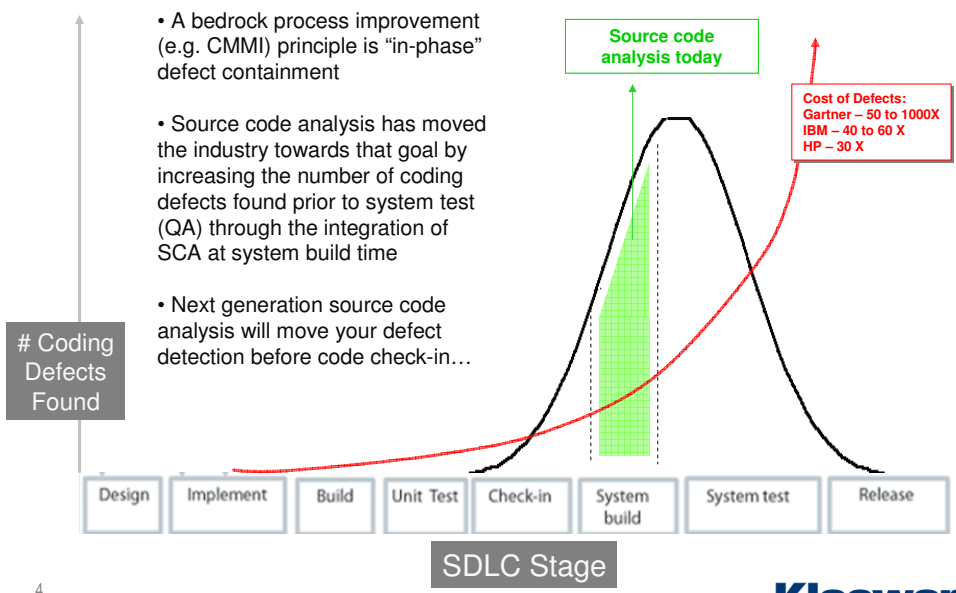

- Solution: Static source code analysis; white box testing

3

Source Code Analysis Today

```
print_header( -- void FaxCli
notification -- void FaxCli
sed -e "s/APP_VERSION/${APP_VEIR
{double md, nd, q, *l
```

4

Enabling the developer – accurate local analysis

```
print_header( -- void FaxCli
$notification -- void FaxCli
sed -e "s/APP_VERSION/${APP_VERS
{double md, nd, q, *l
```

Developer SCA - Benefits

- Reported problems can be fixed right away by the developer before it impacts anyone else
- Enables “in-phase” defect containment

Developer SCA – Limitations

- Accuracy problems if a developer runs only a few files without full system context
- Developers can’t communicate changes/updates to defects they’re reviewing

System SCA - Benefits

- Required for good analysis accuracy due to “whole system” visibility
- Essential for management and build over build reporting on quality trends

Systems SCA – Limitations

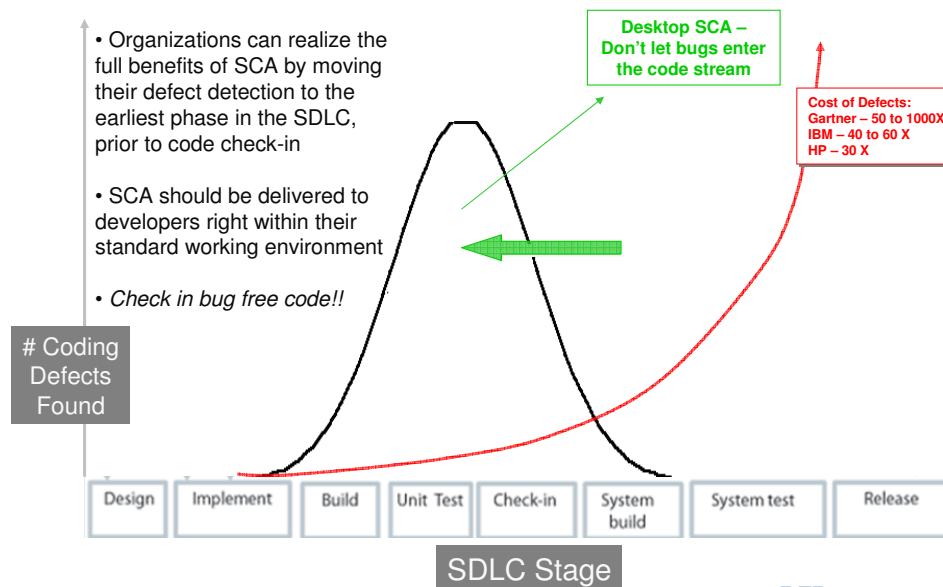

- Doesn’t enable “in-phase defect containment” – developers have to check-in broken code to find out its broken
- Developers still caught in a “rinse and repeat” bug finding/fix/check-in cycle

5

Klocwork

True In-Phase Defect Containment

```
print_header( -- void FaxCli
$notification -- void FaxCli
sed -e "s/APP_VERSION/${APP_VERS
{double md, nd, q, *l
```

6

Klocwork

Enabling the developer – accurate local analysis

```
print_header( ... void FaxCli
$notification ... void FaxCli
sed -e "s/APP_VERSION/${APP_VERS
{double md, nd, q, *t
```

- SCA developer desktop is automatically connected with system analysis
 - » Best performance, best accuracy, full system context delivered locally
 - » Creates peer-to-peer collaboration on bug resolution
 - » Defect “fingerprint” allows defect ID and developer actions to stay with the defect, ensuring developers don’t duplicate work on same bug
 - » Integrated within IDE, or available via simple command line
- Combines the productivity benefits of desktop source code analysis with the power and accuracy of system-wide analysis
- Supports Agile Development

7

Klocwork

Source code quality defects

```
print_header( ... void FaxCli
$notification ... void FaxCli
sed -e "s/APP_VERSION/${APP_VERS
{double md, nd, q, *t
```

- | | |
|---|---|
| <ul style="list-style-type: none"> ▪ C / C++ <ul style="list-style-type: none"> » NULL pointer dereference » Buffer overflow » Memory leaks » Un-validated user input » Un-initialized data » » Style & Standards | <ul style="list-style-type: none"> ▪ Java <ul style="list-style-type: none"> » Concurrency » Resource Leaks » Web application vulnerabilities » » Style & Standards |

Source Code Security Initiatives

```
print_header( ... void FaxCli  
$notification ... void FaxCli  
sed -e "s/APP_VERSION/${APP_VEKS  
{double md, nd, q, *l
```

- **NIST, National Institute of Science and Technology, part of Department of Commerce**
 - » **Software Assurance Metrics and Tools Evaluation (SAMATE)**
 - » SAMATE Reference Dataset contains code snippets containing vulnerabilities/weaknesses in C/C++ and Java

- **Department of Homeland Security (DHS) is also driving a security initiative called the Common Weakness Enumeration (CWE)**
 - » CWE is developing a catalog of known software weaknesses collated from academic and industry sources

- OWASP Top 10
- PCI compliance

9

Klocwork

OWASP Top 10 2007

```
print_header( ... void FaxCli  
$notification ... void FaxCli  
sed -e "s/APP_VERSION/${APP_VEKS  
{double md, nd, q, *l
```

- [Cross Site Scripting \(XSS\)](#)
- [Injection Flaws](#)
- [Malicious File Execution](#)
- [Insecure Direct Object Reference](#)
- [Cross Site Request Forgery \(CSRF\)](#)
- [Information Leakage and Improper Error Handling](#)
- [Broken Authentication and Session Management](#)
- [Insecure Cryptographic Storage](#)
- [Insecure Communications](#)
- [Failure to Restrict URL Access](#)
- PCI compliance = OWASP support

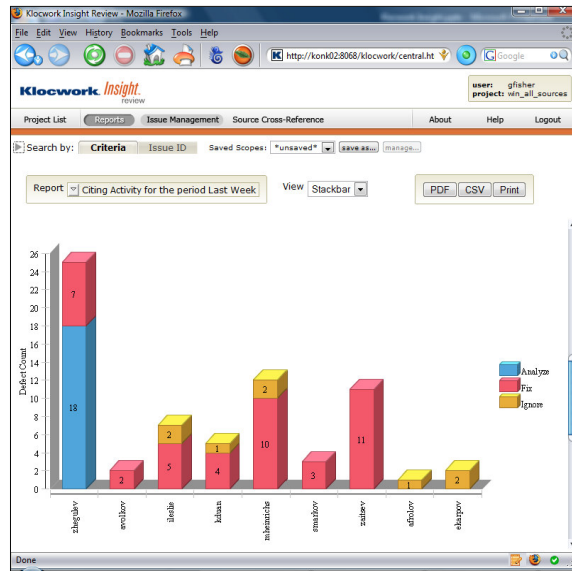

10

Klocwork

Metrics & Trending

```
print_header/ -- void FaxCli
$notification
sed -e "s/APP_VERSION/${APP_VEKS
{double md, nd, q, *L
```

- Quality reporting at all levels, up to the minute, from system and desktop analysis
 - » Aggregate
 - » Drill down
 - » Scope
- Understand source code quality metrics by component, team or geography
- Build over build source code quality trending
- Source code analysis ROI information

Klocwork

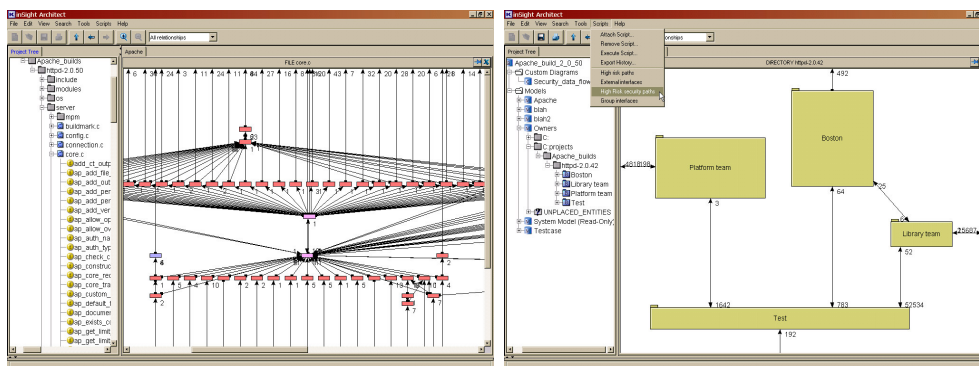

11

Architectural Analysis

```
print_header/ -- void FaxCli
$notification
sed -e "s/APP_VERSION/${APP_VEKS
{double md, nd, q, *L
```

Understand and Optimize your Architecture

- Graphical view of all components at all levels plus all relationships between components
- Reduce complexity, simplify architecture, improve maintainability / testability
- Create more re-usable, independent, longer lasting components
- Clean-up header file anomalies for shorter build times and improved maintainability
- Perform impact analysis and architectural improvement experimentation
- Create architecture rules and enforce secure design principles at a code level

Klocwork

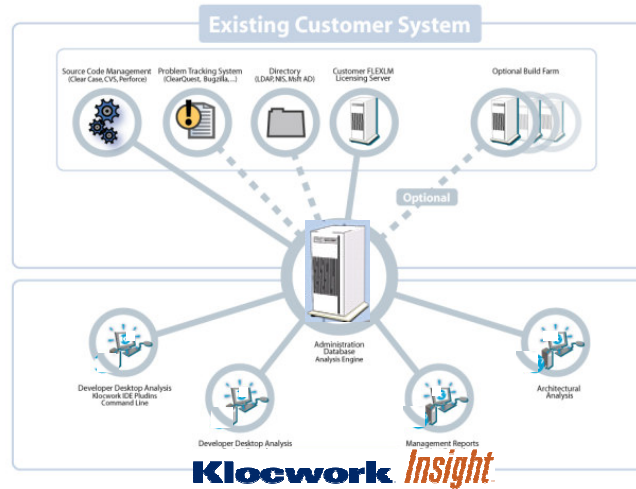

12

Environment Integration

```
print_header( -- void FaxCli
$notification -- void FaxCli
sed -e "s/APP_VERSION/${APP_VEKS
{double md, nd, q, *l
```

Extending your existing enterprise investments

- Integrate with existing build process
 - » SCM system (ClearCase, Perforce, SVN, CVS, etc.)
 - » Build automation (make, ant, etc.)
 - » Build distribution
- Integrate with existing security environment
 - » Directory synchronization (LDAP, NIS)
- Integrate with problem tracking environment
 - » ClearQuest, Bugzilla, etc.

13

CONFIDENTIAL

Klocwork

Motorola Case Study

```
print_header( -- void FaxCli
$notification -- void FaxCli
sed -e "s/APP_VERSION/${APP_VEKS
{double md, nd, q, *l
```

- Six Sigma
- Corporate source code quality & security initiative
- Government & Public Safety
- Mobile Devices
- iDEN success story
- Connected Homes

14

Klocwork

Wrap-up

```
print_headerf ... void FaxCli  
$notification ...  
sed -e "s/APP_VERSION/${APP_VERS  
{double md, nd, q, *t
```

- Questions????????????
- I appreciate your time and interest
- Specific tool literature available
- Feel free to contact me at any time
